Planning, surgery, prosthetics: How to achieve Esthetics in today's economic climate treating the fully- edentulous patient with implants?

SERGIO PIANO

DDS

ITALY

Graduated DDS at the University of Genoa in 1988. Visiting Assistant in 1991-1992 at the University of Geneva. Active Member of SIO, IAED, EAED, ITI fellow. Private practitioner in Genoa.

More than often today, it is necessary to offer edentulous or hopeless dentition patients a treatment with implants that resolves functional and esthetic problems. Usually, these patients would like to avoid removable provisional prosthesis and to move straight from their compromised dentition to a fixed rehabilitation on implants, even if these solutions are rather expensive and time consuming as well.

In this presentation, a simplified approach for minimising both the surgical impact, the treatment time and the cost, nevertheless improving the final esthetic quality, is proposed thanks in particular to an accurate pre-operative analysis, the reduced number of implants used (the two distal of them often placed in tilted position), and a simplified prosthetic phase.

Moreover, when the reduction of the costs is not one of the main issues, the same accurate pre-operative analysis can be used to develop a “state-of-the-art” final rehabilitation, involving digital tools such as guided surgery and CAD/CAM procedures.

Straumann Pro-Arch components allows the dentist to face all these cases reducing the overall complexity without compromising the outcomes.

During the lecture, emphasis will be placed on diagnosis and treatment planning, and on prosthetic, surgical and laboratory protocols.

A wide array of successful clinical cases will illustrate with pictures and videos the efficacy of this approach.

DATE: 24.11.2017 – Warsaw

TIME: 9:00 - 17:00

VENUE: Airport Hotel Okęcie Warsaw

FEE: 1200 zł

COURSE LANGUAGE: English

REGISTRATION: Schmidtdental. - Marta Gańska
